

BRAKEBUSH SAVES ON POULTRY PROCESSING COSTS WITH CLARION® COMPRESSORGARD® 68

Brakebush Brothers, Inc. is a family-owned and operated processor of chicken products, boasting over a century of experience in delivering the highest quality chicken to customers across the United States. Protecting their equipment, minimizing overall downtime and maintaining profitability while complying with USDA incidental food contact regulations takes precedence.

Always looking to deliver improved and safer results, **Clarion Lubricants experts and the Condon Oil team advised Brakebush to switch to an NSF H1-registered fluid like Clarion CompressorGard 68. This oil meets the requirements of U.S. FDA regulation 21 CFR 178.3570 and is designed for processing and packaging machinery where the possibility of incidental contact with food products exists.**

Switching to Clarion CompressorGard 68 in 2004 enabled them to keep up with their production goals, and they no longer had to change out the oil in their equipment every year. Brakebush also saw no

foaming on wear items like shaft seals, longer-lasting conveyor motors and experienced less frequent water changes. The fully synthetic fluid can readily separate from water, has a low pour point, is stable in varying temperature ranges, and offers superior protection against wear, rust, corrosion and deposits.

Clarion CompressorGard 68 is recommended for rotary screw and vane compressors, is engineered for air compressors used in the food service industry and does not contain any natural products from animals, nuts or genetically modified organisms (GMOs).

"We have not gone through shaft seals on the continental hydraulic pumps since using Clarion CompressorGard 68. Our orbit motors are sharpened. The motors on the conveyors are also very long-lasting. The oil has very good water separation qualities and we don't have to change it out due to contamination."

Pat Hamilton, Utilities Manager
Brakebush Brothers, Inc.

THE TROUBLE-FREE APPROACH TO SALES

Brakebush has trusted Clarion for over twenty years and has been trouble-free ever since. Doing so has maintained their profitability, extended the life of their equipment and reduced overall downtime, which has saved them tens of thousands of dollars an hour.

Results may vary based on operating conditions and other factors. All Clarion Lubricants products are backed by the Clarion warranty.

"The biggest success we can take is the longevity and durability of the products, along with the service life. Brakebush no longer has to incur expensive annual or semiannual change-outs with Clarion."

Tim Heller, Sales Representative
Condon Oil Company

BRAKEBUSH CHICKEN PROCESSING PROFILE

- ▶ Established in 1925
- ▶ Headquarters: Westfield, Wisconsin
- ▶ Equipment used in their five poultry production facilities includes screw compressors, pneumatic and hydraulic systems, electric motors, gear boxes, water heaters, forklifts, palletizing robots, conveyor belts and much more
- ▶ Specializes in the careful production, advanced food science, quality assurance, microbiology and transportation of its chicken products across the country

FEATURED PRODUCTS

Incidental Food Contact (NSF H1) Registered Synthetic Oil

- ▶ Clarion CompressorGard 68

Greases

- ▶ Clarion PM Hi-Temp Food Machinery 100, No. 2
- ▶ Mystik® JT-6® Synthetic Electric Motor #2
